

The Society for Sustainability & Environmental Engineering,
Lake Macquarie City Council and Newcastle City Council
invite you to a workshop on

Climate Code Red Emergency Planning

If Australia declared 'Code Red' status on climate change and had to reduce carbon emissions by 50% immediately and at all costs, what would we do? Come and contribute your ideas in a national series of workshops, taking a fresh look at options to combat climate change using a light-hearted approach to explore a serious situation.

Keynote Address by Professor Ian Lowe

Professor Lowe will present a clear and balanced explanation of the current scientific understanding of global warming, and its effects on Australia's climate, land use, energy and water consumption, and on our economy, industry, agriculture and daily life. Professor Lowe will also challenge us to address the changes brought by global warming, and to accept responsibility for planning and creating a sustainable future.

Professionally facilitated by Fast Meetings

- When:** Wednesday, 14 October 2009
4.00pm - 7.00pm
- Where:** Newcastle Panthers
King Street, Newcastle West
- RSVP:** Essential by 10 October 2009
Katrina Baker Ph: 02 4926 4440
Email: kbaker@engineersaustralia.org.au

There is no charge to attend this workshop
